

G01 / PROTECTED ANSWERS

G01 REVIEW A

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

Reconciliation and its limits 4

A concise handover example 4

Changed micro-task review 4

Record what actually improved 4

Fresh full reassessment 4

Read this first

Open this book after saving your own attempt. Compare the reasoning and result, repair the cause of a mistake, then close the answer and try changed inputs.

YOUR STANDALONE GATE BOOK

Open only after Gate A attempt is saved

Assessment rule: Save the current attempt before opening its review. Fresh Gate B stays closed until explicitly assigned after repair.

Structure and rule checks

Five source rows, six fields, one row per order containing one product kind. `order_id` is the intended key. No ID is missing or repeated. IDs and items are text; quantities are positive integers; prices are nonnegative numeric amounts; `ordered_on` is a date; `is_paid` is Boolean with missing allowed. Header labels are not a sixth order.

E003 has the unknown payment status. Preserve it. A permitted trim converts the source text "Pen " to "Pen" while retaining the original. It removes known ordinary spaces; it does not infer a missing business fact.

Row calculations and payment groups

Order	Calculation	Amount	Group
E001	2 x 45	90.00	Paid
E002	4 x 9	36.00	Unpaid
E003	3 x 20	60.00	Unknown
E004	2 x 25	50.00	Paid
E005	5 x 6	30.00	Unpaid

Whole amount is 266.00. Paid is $90 + 50 = 140$ across two orders. Unpaid is $36 + 30 = 66$ across two orders. Unknown is 60 across one order. Known status includes paid and unpaid, giving 206 across four orders. These are different questions: paid alone is not all known status.

If the first quantity temporarily changes from 2 to 3, the total increases by one unit price, 45, giving 311. Restoring 2 returns 266. Other correctly chosen one-input changes are acceptable if your prediction and observed effect agree. A hand-typed answer total that does not update fails the formula test even if it originally displayed 266.

Category summary and chart

Paper contains Notebook 90 and Folder 60, total 150. Writing contains Pen 36, Marker 50 and Pencil 30, total 116. The PivotTable must sum amounts, not count them. Its grand total is 266. A bar or column chart should show Paper 150 and Writing 116 with an amount label and a zero baseline. Do not include Grand Total as a third category.

Paper exceeds Writing by 34 in this delivery. The result does not establish profit, future demand or typical monthly performance. No costs, future orders or representative sampling claim was supplied.

Reconciliation and its limits

Payment counts: $2 + 2 + 1 = 5$. Payment amounts: $140 + 66 + 60 = 266$. Category amounts: $150 + 116 = 266$. The working source IDs should match the five preserved IDs. Your independent check of a row should use the original quantity and price, not another reference to the already calculated amount cell.

Dropping E003 leaves four rows and 206. Internally correct subtotals might still sum to 206, so compare against the original five-row source and independent full amount. Misclassifying E003 as unpaid leaves count five and total 266 unchanged, but unpaid becomes 126 and unknown becomes zero. A source-to-group comparison catches that false classification.

A concise handover example

"The five supplied orders dated 12 September 2026 total 266.00. Recorded paid is 140.00, recorded unpaid is 66.00 and unknown status is 60.00 for E003. Paper contributes 150.00 and Writing 116.00. Counts and amounts reconcile to the preserved source; payment accuracy has not been independently confirmed. E003 needs payment clarification. The attached workbook retains the source, formulas and summaries."

Your wording need not match. It must preserve the scope, results, unknown and limits. Keep the real file with this explanation. A path written in a study record does not copy or embed the workbook into that record.

Changed micro-task review

F001 is $2 \times 11 = 22$, Paid. F002 is $1 \times 24 = 24$, Unpaid. F003 is $2 \times 38 = 76$, Unknown. Whole amount is 122. Known status combines F001 and F002, giving 46 across two records. Unknown remains 76 across one. Counts reconcile $2 + 1 = 3$; amounts $46 + 76 = 122$.

Paper includes Folder 24 and Notebook 76, giving 100. Writing is Pen 22. Category amounts reconcile $100 + 22 = 122$. Answering 22 for known status would repeat the mistake of excluding a supplied FALSE status. Explain the inclusion rule before selecting records.

Record what actually improved

Keep your first submission, the review comparison and the changed micro-task as separate entries. Reassess only the dimensions you have now demonstrated, while retaining their earlier levels in history. Do not label a workbook correct because you copied this explanation; independently reproduce the relevant calculation and show the changed check.

Fresh full reassessment

If a full reassessment is assigned after repair, use the sealed G01-B brief. Do not open G01-B early and do not relabel the changed micro-task as Gate B.
