

G04 / ASSESSMENT

G04 GATE B

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

Pipeline Engineering boundary after M10

This is a fresh stage-boundary assessment. Use learner books/reviews closed. Save code/config/results/errors before repair. No forced countdown timer.

Dataset: `practice/assessment/retest/clinic_dispatch.csv`

1. Changed architecture

Design the same controlled pipeline for `clinic_dispatch.csv`; state the new grain and partition key.

2. Changed Docker topology

Explain how the same worker image could be reused with a different source URL/input reference and why that should be runtime config.

3. Changed schedule

Process Sep5 and Sep6, then plan a fresh historical rerun of Sep5.

4. Changed controls

Calculate row counts and minutes totals, then state one validity rule.

5. Changed incident

A publish task timed out after external side effect status became unknown. Decide whether automatic retry is safe.

6. Changed handoff

Explain exactly what would be different if the schedule becomes hourly.

Gate decision

PASS only when every critical competency has defensible evidence and no unresolved data-loss, duplicate-side-effect, secret-leak, partition-time or unsafe-retry failure remains. Repair a weak competency, then use the different fresh Gate B after review and repair. Reading Review A is not a Gate B pass.

Path rule: use 09_GATES/G04 as the working folder. The named practice/assessment file is included beneath this gate folder.
