

G07 / ASSESSMENT

G07 GATE A

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

Contents

Tap a topic or use the PDF bookmarks. These numbers are the actual pages in this edition.

Read this first

Final stage boundary | Master untimed first; optional interview timing only after a correct cold attempt

Cold rule: Use only the supplied fixture, your blank editor/terminal and your own M00-M19 knowledge. Save first attempt before opening any review.

1. Resume/profile truth audit: rewrite this hypothetical claim after identifying at least two overclaims: “I am a Data Engineer with 3 years of production experience building enterprise-scale Spark pipelines for millions of users.” Assume the only evidence available is this course portfolio.
2. SQL: from `gate_a_shipments.csv` loaded to SQLite, return delivered amount by hub and failed-shipment count. State grain and reconcile delivered total.
3. Python: return duplicate shipment IDs and counts by status from a list of dictionaries; give complexity.
4. Troubleshooting: a retry wrote output but checkpoint was not committed. State safe recovery and idempotency checks.
5. Architecture: design daily + 15-minute exception analytics for 2M shipments/day. Include raw, state, quality, serving, monitoring, cost/security.
6. Project defense: 3-minute walkthrough of one M18 project with one failure/recovery and one limitation.
7. Behavioral/English: answer a project failure using STAR, then explain the same failure to a nontechnical manager.
8. Job targeting: decide APPLY/SKIP for a JD that says “Bachelor degree or equivalent practical experience; SQL/Python required; Spark preferred.” Explain evidence.

Pass evidence

- Saved SQL/code/outputs where requested.
- Explicit expected controls and reconciliation.
- No fabricated resume/profile/project claims.
- Architecture includes state/replay, quality, failure, security and cost.
- Communication answers are specific and evidence-backed.
- Critical failure: destructive recovery, silent data loss, committing failed valid work, fake experience, or answers opened
- before attempt.
