

M00 / ASSESSMENT

M00 Module Revision Test

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

MODULE REVISION TEST

Save your answers before opening the protected answer guide. No forced timer. First prove the competency untimed; later you may record interview-style time if useful. This test does not replace a protected Gate.

Coverage: 8 canonical lessons

Route: learner book -> practice -> revision -> closed-book test -> protected answers -> changed retry.

Rules

Work with learner book, review book, answer guide and AI solving closed. Save one answer/evidence item for every lesson. If a task needs a PC, write your prediction first, then run it. Mark PASS only when the result and your explanation agree.

T01 - DE00-01 | Files, folders, drives and paths

Create a folder called `second_attempt` beside `first_attempt`, not inside it. Save another `location.txt` there containing "second attempt". Reopen each `location.txt` and explain which path leads to which contents.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T02 - DE00-02 | File extensions and common data files

Create a plain text file named `names.txt` containing Asha and Ravi on separate lines. Make a copy named `names-backup.txt`. Explain what changes if you rename only the copy to `people.txt`, and what does not change.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T03 - DE00-03 | Download, ZIP, extract, copy, move and rename

Extract `file-practice.zip` into another new folder called `recovery`. Without changing any files, find the original Pen quantity there and explain why it differs from your edited attempt.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T04 - DE00-04 | Install only the software this stage needs

Close VS Code, then reopen it from Start without opening the installer. Record its version again and compare with your saved setup record. If unavailable, instead write the exact blocker and the next official instruction you need.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T05 - DE00-05 | VS Code from zero

Make a copy named editor-retry.txt. Change only its final sentence to "This is my changed retry." Open the original and copy to confirm that the original still has your first explanation.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T06 - DE00-06 | Terminal fundamentals

From DE_Study, navigate directly to practice\first_attempt using one relative path, then use an absolute path copied from File Explorer to return to evidence. Record the ending location.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T07 - DE00-07 | Read errors and repair one cause at a time

Start inside evidence. Try Set-Location -LiteralPath '.\practice'. If evidence has no practice child, it fails even though practice exists beside evidence. Diagnose this failure, then navigate to the intended practice folder without creating a new one.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T08 - DE00-08 | Study, evidence, attempts and review discipline

Save a separate retry record explaining one path error you repaired. Make a new dated backup copy that includes the original attempt and this retry. Keep your earlier backup too. Reopen the new backup and check that both records are present. Explain why the earlier backup cannot contain work created after it was made.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY
