

M00 / PROTECTED ANSWERS

M00 Module Revision Test Answers

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

Read this first

Open this book after saving your own attempt. Compare the reasoning and result, repair the cause of a mistake, then close the answer and try changed inputs.

PROTECTED TEST ANSWERS

Use this file to validate and repair, not to erase your first attempt. Compare the expected control with what you actually observed, close this guide, then solve a changed retry if the competency was weak.

Coverage: 8 canonical lessons

Route: learner book -> practice -> revision -> closed-book test -> protected answers -> changed retry.

How to use the protected answers

Open only the lesson you attempted. The guide gives the expected control/behavior, not permission to copy. If you used it, close it and perform a changed retry before marking the lesson mastered.

A01 - DE00-01 | Files, folders, drives and paths

Expected answer / validation

Both folders should appear when you open practice. The first document keeps its original path text; the second contains "second attempt". If both documents changed, you probably reopened the same file twice. Compare the parents in File Explorer and retry the save with a distinct destination.

After repair: close this guide and repeat the competency on a changed input/scenario. Preserve the original failed/partial attempt.

A02 - DE00-02 | File extensions and common data files

Expected answer / validation

The copy's name changes; the two lines inside it do not. The original names.txt still exists. Its .txt format stays the same. You should have two separate files, each containing Asha and Ravi.

After repair: close this guide and repeat the competency on a changed input/scenario. Preserve the original failed/partial attempt.

A03 - DE00-03 | Download, ZIP, extract, copy, move and rename

Expected answer / validation

Recovery should contain Pen,3 because the archive holds the original input. The working copy's edit did not change the archive. This is the first version of an engineering habit: keep enough source material to reproduce or repair your work.

After repair: close this guide and repeat the competency on a changed input/scenario. Preserve the original failed/partial attempt.

A04 - DE00-04 | Install only the software this stage needs

Expected answer / validation

A successful relaunch confirms that the installed application remains available. Repeatedly running the installer is unnecessary. If blocked, the lesson remains pending practical setup; your diagnostic record is still useful evidence of what must be resolved.

After repair: close this guide and repeat the competency on a changed input/scenario. Preserve the original failed/partial attempt.

A05 - DE00-05 | VS Code from zero

Expected answer / validation

There should be two files. Editing the copy should not change the original. If the original changed, you probably edited its tab. Verify the filename shown on the tab and reopen both through File Explorer.

After repair: close this guide and repeat the competency on a changed input/scenario. Preserve the original failed/partial attempt.

A06 - DE00-06 | Terminal fundamentals

Expected answer / validation

The first navigation can use `'..\practice\first_attempt'`. Returning with the full path to evidence does not depend on where you currently are. Your final Get-Location should end with `DE_Study\evidence`. Explain

this difference before you mark the practical check complete.

After repair: close this guide and repeat the competency on a changed input/scenario. Preserve the original failed/partial attempt.

A07 - DE00-07 | Read errors and repair one cause at a time

Expected answer / validation

Here the spelling is correct; the starting location is wrong for that relative path. Use `'..\practice'` from evidence, or the actual absolute path. Get-Location should confirm `DE_Study\practice`. This is a different cause from the first error, which is why memorising "fix spelling" is not enough.

After repair: close this guide and repeat the competency on a changed input/scenario. Preserve the original failed/partial attempt.

A08 - DE00-08 | Study, evidence, attempts and review discipline

Expected answer / validation

The newer backup should contain the first attempt and retry. The earlier backup represents an earlier point in time; it does not update itself when you create another file elsewhere. A missing retry in that older copy is expected. A missing retry in the newer copy means you must inspect what you selected and where you copied it.

After repair: close this guide and repeat the competency on a changed input/scenario. Preserve the original failed/partial attempt.
