

M00 / STUDY COMPANION

M00 Quick Revision Book

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

QUICK REVISION BOOK

Use this only after you have studied the learner book. Each lesson keeps the canonical language and core proof, plus one recall task. This is not a replacement for hands-on practice.

Coverage: 8 canonical lessons

Route: learner book -> practice -> revision -> closed-book test -> protected answers -> changed retry.

How to revise

Read the lesson card, close the page, explain it in your own words, then answer the recall task. If recall is weak, return to that lesson only - not the entire module.

DE00-01 | Files, folders, drives and paths

60-second recall

A filename identifies an item within a folder. A full path includes its location. Close and reopen to check a save. Keep original inputs separate from working copies. You may move on when you can find both retry files and explain their locations without guessing.

[Refresh source: Windows 11 File Explorer for Beginners](#)

Recall task

Create a folder called second_attempt beside first_attempt, not inside it. Save another location.txt there containing "second attempt". Reopen each location.txt and explain which path leads to which contents.

DE00-02 | File extensions and common data files

60-second recall

Extension: a filename label. Format: the contents' structure. Renaming is not conversion. CSV is useful for simple data exchange; XLSX keeps workbook features. Show extensions and inspect the actual final ending before opening unfamiliar files.

[Refresh source: Windows 11 File Explorer for Beginners](#)

Recall task

Create a plain text file named names.txt containing Asha and Ravi on separate lines. Make a copy named names-backup.txt. Explain what changes if you rename only the copy to people.txt, and what does not change.

DE00-03 | Download, ZIP, extract, copy, move and rename

60-second recall

Download first; extract the complete package; preserve raw; copy before editing; save attempts with distinct names. Copy keeps the source. Move changes its location. Re-extracting an untouched archive can recover a damaged practice input.

[Refresh source: Windows 11 File Explorer for Beginners](#)

Recall task

Extract file-practice.zip into another new folder called recovery. Without changing any files, find the original Pen quantity there and explain why it differs from your edited attempt.

DE00-04 | Install only the software this stage needs

60-second recall

Use official sources. Distinguish installer, installation and successful launch. Record actual versions and blockers. Install tools when a lesson needs them. Current installation authority: [VS Code on Windows](<https://code.visualstudio.com/docs/setup/windows>), checked 13 September 2026.

[Refresh source: Python for Beginners Tutorial - VS Code installation segment](#)

Recall task

Close VS Code, then reopen it from Start without opening the installer. Record its version again and compare with your saved setup record. If unavailable, instead write the exact blocker and the next official instruction you need.

DE00-05 | VS Code from zero

60-second recall

Open the containing folder; inspect the actual filename; save; close; reopen. VS Code edits files that remain on your drive. New text needs a filename and destination. You can study these fundamentals without extensions or AI-generated code.

[Refresh source: Learn Visual Studio Code in 15 minutes: 2026 Official Beginner Tutorial](#)

Recall task

Make a copy named editor-retry.txt. Change only its final sentence to "This is my changed retry." Open the original and copy to confirm that the original still has your first explanation.

DE00-06 | Terminal fundamentals

60-second recall

Get-Location: where am I? Get-ChildItem: what is here? Set-Location: look from another folder. Single quotes keep a path together. Dot means here; two dots mean parent. Check location before changing anything else.

[Refresh source: Microsoft PowerShell for Beginners - Video 1 Learn PowerShell](#)

Recall task

From DE_Study, navigate directly to practice\first_attempt using one relative path, then use an absolute path copied from File Explorer to return to evidence. Record the ending location.

DE00-07 | Read errors and repair one cause at a time

60-second recall

Record expected versus actual. Inspect the exact command and current location. Propose one cause supported by observations. Change one thing and retest. Preserve the failed attempt and explain the successful repair.

[Refresh source: Microsoft PowerShell for Beginners - Video 1 Learn PowerShell](#)

Recall task

Start inside evidence. Try Set-Location -LiteralPath '.\practice'. If evidence has no practice child, it fails even though practice exists beside evidence. Diagnose this failure, then navigate to the intended practice folder without creating a new one.

DE00-08 | Study, evidence, attempts and review discipline

60-second recall

Read, watch, do, attempt, review, repair, retry, explain, revisit. Keep original attempts. Use the supplied revision notes. Record practical evidence, not pages of copied theory. Keep actual files as well as their references. M00 is ready when you can locate, edit, save, reopen and repair a file task independently.

[Refresh source: Windows 11 File Explorer for Beginners](#)

Recall task

Save a separate retry record explaining one path error you repaired. Make a new dated backup copy that includes the original attempt and this retry. Keep your earlier backup too. Reopen the new backup and check that both records are present. Explain why the earlier backup cannot contain work created after it was made.
