

M06 / ASSESSMENT

M06 Module Revision Test

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

MODULE REVISION TEST

Save your answers before opening the protected answer guide. No forced timer. First prove the competency untimed; later you may record interview-style time if useful. This test does not replace a protected Gate.

Coverage: 13 canonical lessons

Route: learner book -> practice -> revision -> closed-book test -> protected answers -> changed retry.

Rules

Work with learner book, review book, answer guide and AI solving closed. Save one answer/evidence item for every lesson. If a task needs a PC, write your prediction first, then run it. Mark PASS only when the result and your explanation agree.

T01 - DE06-01 | Verify WSL2 and choose a safe Linux workspace

Fresh shell + new workspace path; translate a Windows path to /mnt/c form and explain the boundary.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T02 - DE06-02 | Linux navigation and safe file operations

New source/ready tree; use one absolute and one relative path; prove copy vs move.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T03 - DE06-03 | Pipes, redirection, command history and inspection

New text input; filter/count to stdout file and redirect a separate failure to stderr file.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T04 - DE06-04 | Permissions, packages, sudo and command safety

Second script: remove/restore only owner execute and prove direct-execution behavior.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T05 - DE06-05 | Git state: init, status, add, commit, diff and log

Stage a file, edit it again, commit, and prove the later unstaged edit remains.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T06 - DE06-06 | Branches, merges and real conflict resolution

Different README run-command conflict; resolve according to actual project interface.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T07 - DE06-07 | GitHub remotes: push, fetch, pull and tracking

Two clones + local bare remote: fetch in clone B and prove worktree does not change until integration.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T08 - DE06-08 | Pull requests and review workflow

Changed PR/review scenario containing accidental .env; block merge and prove the proposed diff is repaired.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T09 - DE06-09 | Python virtual environments inside a repository

Second repo: recreate .venv from scratch and run project without copying environment directory.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T10 - DE06-10 | .gitignore, secrets and repository hygiene

Track fake demo-secret once; ignore is insufficient; stop current tracking and prove history still contains it.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T11 - DE06-11 | restore, revert, reflog and safe history repair

New bad shared-style commit: revert it; then create a recovery branch from a reflog-discovered commit.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T12 - DE06-12 | Shell scripts, exit codes and environment-driven commands

New shipment wrapper: positional input + OUTPUT_DIR; test path with spaces and distinct exit codes.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY

T13 - DE06-13 | Repository handoff and clean-clone reproducibility

Fresh shipment repository with changed branch/conflict/revert/wrapper rules and a new clean-clone proof.

Save: answer / code / command / result + one validation note. Status: PASS / REVIEW NEEDED / RETRY
