

M18 / STUDY COMPANION

M18 Quick Revision Book

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

P01 | ParcelFlow Reliable Batch Pipeline 3

P02 | SaaS Billing Analytics Engineering 3

P03 | ClickStream Scalable Lakehouse 3

CAP | OmniRetail Production Data Platform Capstone 3

Read this first

Ready-made portfolio revision - reconstruct the evidence, do not rewrite the whole manual.

P01 | ParcelFlow Reliable Batch Pipeline

- Operations needs daily shipped-order counts, paid revenue and hub-level exception visibility by 07:00.
- Grain before SQL/code. Immutable source evidence before cleaning. Candidate progress only becomes committed
- progress after durable validated output.
- Validate counts, keys, sums and relationships; optimize only after correctness is proven.
- A portfolio repository is credible when clean-clone rerun, failure recovery and changed-input evidence are visible.

P02 | SaaS Billing Analytics Engineering

- Finance needs monthly recurring revenue, invoice collections and plan/customer history with explainable lineage.
- Grain before SQL/code. Immutable source evidence before cleaning. Candidate progress only becomes committed
- progress after durable validated output.
- Validate counts, keys, sums and relationships; optimize only after correctness is proven.
- A portfolio repository is credible when clean-clone rerun, failure recovery and changed-input evidence are visible.

P03 | ClickStream Scalable Lakehouse

- Growth and product teams need trustworthy event funnels while engineering must handle volume, skew,
- late/schema-changed events and replay.
- Grain before SQL/code. Immutable source evidence before cleaning. Candidate progress only becomes committed
- progress after durable validated output.
- Validate counts, keys, sums and relationships; optimize only after correctness is proven.
- A portfolio repository is credible when clean-clone rerun, failure recovery and changed-input evidence are visible.

CAP | OmniRetail Production Data Platform Capstone

- Executives and operations need same-day revenue/inventory truth while engineering must preserve replay, security
- boundaries and recoverability.

- Grain before SQL/code. Immutable source evidence before cleaning. Candidate progress only becomes committed
- progress after durable validated output.
- Validate counts, keys, sums and relationships; optimize only after correctness is proven.
- A portfolio repository is credible when clean-clone rerun, failure recovery and changed-input evidence are visible.
