

M19 / ASSESSMENT

M19 Module Revision Test

Standalone Zero-to-Job-Ready Data Engineer 2026

Study, practise, check and explain.

A complete learning route

Start with the lesson video. Read the worked explanation beside it, pause to reproduce the example, then solve the supplied task. The books contain your study notes; keep your own work and results as evidence.

Use the protected answers after saving your first attempt. A changed retry shows what you can now do independently. There is no forced timer during learning.

One course. M00-M19. 264 lessons and 50 project phases.

Rules: Save your genuine attempt. No learner book, reviews or protected answers. No forced timer. Optional interview timing comes only after correct untimed mastery.

- Q1. Write three truthful resume bullets for an entry-level DE portfolio and identify the proof for each.
- Q2. Give a 90-second GitHub project-review checklist and name two reasons to unpin a repository.
- Q3. Write a defensible professional headline/About opening that does not imply unearned employment.
- Q4. Classify three degree rules: mandatory CS-only, CS preferred, degree/equivalent. State apply/skip reasoning.
- Q5. SQL: explain how you would return latest paid order per customer while handling timestamp ties.
- Q6. Python: explain/set-code shape for first duplicate and its complexity.
- Q7. Incident: source=5000, sink=4970, checkpoint advanced. Give safe first five actions.
- Q8. Give a 7-part project walkthrough for one M18 project.
- Q9. Design a 15-minute order analytics pipeline and name two trade-offs.
- Q10. Write a truthful STAR answer outline for a project failure.
- Q11. Rewrite a vague technical sentence into Claim -> because -> evidence -> next step.
- Q12. Given many applications but zero screens, choose the first weekly repair hypothesis and metric.
- Q13. Describe the untimed-first approach for an arrays/hashmap coding assessment.
- Q14. Combined SQL+Python simulation: name grain, two reconciliation controls and one tie policy.
