

M18 QUICK REFERENCE

Portfolio build / evidence / recovery

THE PROJECT LEARNING LOOP

- Orient before building.
- Create learner-owned work.
- Validate independently.
- Preserve failures and changed retries.
- Separate static from runtime truth.
- Route M18 -> M19 -> G07.

BEGINNER-FIRST PROFESSIONAL INSTITUTE REBUILD

Build -> prove -> break -> repair -> rerun -> defend. No solved portfolio project is supplied.

This book is your teacher

Five project questions

What is the grain? What invariant matters? What artifact proves the change? What independent control can catch a plausible error? What changed/failure test proves recovery/transfer?

Failure loop

Exact loop

saved attempt -> targeted teaching repair -> changed micro-proof -> validation -> reassessment. Never overwrite first-failure evidence.

Runtime labels

Truth

EXECUTED = real runtime proof; STATIC/SIMULATED = design/fixture; NOT EXECUTED = unavailable/deferred. Never upgrade the label to look stronger.
