

G01 Gate B - Clinic Supply Shipments

Protected independent assessment | sealed fresh full reassessment

Source: G01_GATE_B_SOURCE_CANONICAL.xlsx

Business request: A clinic network wants Delivered shipment value by standardized Zone plus a defensible quality/reconciliation note.

Calculation rule: Delivered value = Units * UnitCost for Delivered rows only.

This is a protected independent assessment. Do not use another Gate answer as a template. Freeze your own attempt before opening any Review.

Required work

- K1** - Record source row count before changing anything; state the source grain and candidate key; work only on a copy/analysis sheet.
- K2** - Identify duplicate candidates, missing values and at least four quality risks/questions. Standardize only confirmed equivalent Region/Zone labels in the working copy; do not invent missing identifiers.
- K3** - Build the requested eligible-population calculation for delivered value using visible formulas/Table/Pivot steps you can show. Keep the eligibility rule explicit.
- K4** - Produce Delivered value by standardized Zone. Use a Pivot/Table/lookup where appropriate and choose one simple chart that matches the comparison question. State the result grain.
- K5** - Create at least two independent validation controls: one count/grain check plus an independent total/recomputation or manual spot-check. Reconcile before reporting.
- K6** - Write 6-10 sentences covering source, grain, quality decisions, result, validation, limitation and one failure mode. Save workbook/evidence path, confidence 0-5 and your own-words explanation. Freeze the attempt before Review.

Gate decision - competency based

Do not calculate a pass percentage. Reviewer marks every competency below as DEMONSTRATED or REPAIR_REQUIRED, cites saved evidence, and records any critical defect.

Competency	Status	Evidence reference	Reviewer note / critical defect
K1 - Source grain, key and preservation	DEMONSTRATED / REPAIR_REQUIRED		
K2 - Data-quality reasoning and safe standardization	DEMONSTRATED / REPAIR_REQUIRED		
K3 - Excel calculation and eligibility logic	DEMONSTRATED / REPAIR_REQUIRED		
K4 - Summary, lookup/Pivot and chart judgment	DEMONSTRATED / REPAIR_REQUIRED		
K5 - Independent validation and reconciliation	DEMONSTRATED / REPAIR_REQUIRED		
K6 - Evidence, explanation and handoff discipline	DEMONSTRATED / REPAIR_REQUIRED		

PASS only if K1-K6 are demonstrated and no unresolved critical defect remains. Otherwise preserve this attempt, open only the matching Review, repair the exact weakness, and complete a changed micro-proof. The next full Gate remains sealed unless explicitly assigned.
