

G02 Evidence & Attempt History Record

APPEND-ONLY: A RETEST NEVER ERASES AN EARLIER ATTEMPT

Create a new row before each Gate attempt or changed repair proof. Keep the old row exactly as it was. A later PASS means your newest evidence demonstrates the skill; it does not rewrite history.

Attempt history

Attempt ID	Type	Saved before Review?	K1-K7 status	Critical defect?	Decision / next route

Evidence contract for each attempt

- SQL/script filename(s) and database/schema used.
- Source row counts and result-grain statement.
- Independent controls/reconciliation values.
- Screenshot/text export only where useful; do not treat "file exists" as proof.
- Error/recovery note and what changed after repair.
- Own-words explanation and confidence.
- Reviewer K1-K7 observations, not a numeric pass percentage.

Reviewer decision vocabulary

DEMONSTRATED: competency proven on this attempt/changed proof. **REPAIR_REQUIRED:** specific evidence is wrong/missing/unsafe. **FULL_REASSESSMENT_ASSIGNED:** open the next sealed Gate only when targeted repair is insufficient to establish a trustworthy fresh proof. **GATE_FAMILY_PASS:** K1-K7 demonstrated, evidence complete, no unresolved critical defect.
