

G07 Evidence Record

Final course-content Gate evidence

Standalone Zero-to-Job-Ready Data Engineer 2026 | G07

Required evidence categories

- K1: Source contracts and ingestion: preserve lineage/checksums, validate schema/types/keys, quarantine defects visibly.
- K2: SQL/modeling/reconciliation: state grain, choose deterministic latest state, join safely, query correctly and reconcile independently.
- K3: Python/state/idempotence: write/debug readable code, handle bad records visibly and prove safe rerun behavior.
- K4: Orchestration/quality/delivery: dependencies, retries/backfill boundaries, blocking quality checks, tests and reproducible handoff.
- K5: Storage/distributed/lakehouse/streaming: reason about files/partitions/Spark/Delta/event time/offsets and batch-vs-stream choices.
- K6: Cloud/security/observability/cost: translate to managed cloud/Fabric, protect PII/secrets, use least privilege and define operational signals.
- K7: Incident recovery and controlled change: diagnose from evidence, recover safely, implement a changed requirement and revalidate.
- K8: Architecture/reproducibility/job-ready defense: explain requirements, decisions, alternatives, limitations, handoff and technical answers from evidence.

Attempt history

Record attempt ID, variant, saved timestamp, Review-open timestamp, failure/repair, fresh reassessment assignment if any, and final human-review decision. Never overwrite a failed attempt.

Course completion boundary

G07 pass completes the rebuilt course content and protected Gates. It does NOT by itself certify Mentor deployment, live external runtimes, Android/browser behavior, or final master-package parity. Those remain final integration QA.
