

G07 Review C - Protected

Open only after saved Gate C attempt

Standalone Zero-to-Job-Ready Data Engineer 2026 | G07

How to use this Review

Compare one control at a time, diagnose the reason for any mismatch, repair the smallest responsible competency, close Review, then use a changed/fresh attempt if assigned. Do not copy a completed implementation from this Review; none is provided.

Baseline protected controls

State	Events	Latest	Accepted	Quarantine	Accepted value
Baseline	11	10	6	4	673.0
After incident	13	10	5	5	568.0
Changed rule / clean baseline	11	10	7	3	750.0

Incident diagnosis

INCIDENT - OPEN ONLY WHEN THE GATE INSTRUCTS YOU

A corrected R309 reading increases usage while the existing invoice total is unchanged. A stale duplicate for R300 also appears. The system must preserve latest-event semantics, stop silent financial mismatch and recover safely.

Changed requirement

CONTROLLED CHANGE REQUEST - OPEN ONLY AFTER RECOVERY EVIDENCE IS SAVED

Business now allows ESTIMATED readings into the operational mart, but they must remain explicitly labeled as estimated. Prove the rule change without leaking service-address PII.

Repair routing

If the issue is localized, repair only that competency. A fresh full Gate B/C is used only when explicitly assigned; it is not an automatic punishment for opening Review.
