

M13 PROTECTED REVIEW + REPAIR

LOCKED UNTIL A GENUINE SAVED ATTEMPT EXISTS. Do not browse for curiosity.

DE13-01 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed domain: classify a medical-imaging repository architecture and state required table guarantees.

DE13-02 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed files: explain why a folder of versioned CSV exports still lacks transactional table semantics.

DE13-03 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed log: reconstruct which snapshot is visible after one failed and two successful commits.

DE13-04 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed state: design create/update/delete checks for inventory records.

DE13-05 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed schema: decide whether adding nullable device_model vs changing amount STRING→STRUCT is safe.

DE13-06 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed history: identify the correct earlier version for rollback investigation and retention risk.

DE13-07 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed clinic data: prove MERGE rerun safety and reject duplicate source key P206.

DE13-08 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed employee dimension: create non-overlapping SCD2 intervals after department change.

DE13-09 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed support-ticket pipeline: reconcile Bronze events to Silver latest-state to Gold SLA summary.

DE13-10 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed maintenance: diagnose a small-files problem without partitioning by a unique ticket ID.

DE13-11 - Review

Strong evidence should show the intended table grain/state, a deterministic operation, an independent control, and a clear explanation of failure/recovery.

Targeted repair

Return only to the weak competency. Re-run a smaller changed example. Preserve the failed attempt; do not overwrite history.

Fresh retry assigned

Changed incident: trace a schema-drift failure from Silver back to source and preserve the failed attempt evidence.
