

M14 PROTECTED REVIEW + REPAIR

LOCKED UNTIL A GENUINE SAVED ATTEMPT EXISTS.

DE14-01 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed clinic alerts: choose batch/streaming and define latency target.

DE14-02 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed IoT domain: define topic and immutable event fields.

DE14-03 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed shipment events: choose key so each shipment stays ordered.

DE14-04 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed notification sink: handle crash/replay without duplicate sends.

DE14-05 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed topic has 4 partitions and 6 consumers: predict assignment capacity.

DE14-06 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed group starts from a different committed offset: reconstruct replay.

DE14-07 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed membership: one consumer dies; explain reassignment and safe state.

DE14-08 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed external payment API: define dedup/idempotency boundary.

DE14-09 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed schema adds nullable device_model then removes event_id: classify safety.

DE14-10 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed Python domain: produce/consume clinic events with explicit group and manual commit.

DE14-11 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed Spark stream: explain consequences of changing/deleting checkpoint.

DE14-12 - Review

Strong evidence names the event grain, ordering scope, progress/offset state, failure boundary and an independent validation.

Targeted repair

Repair only the weak competency; preserve the original attempt. Then close Review and solve the changed retry below.

Changed incident: lag rises only on one partition; diagnose hot-key/downstream possibilities.
