

M18 Quick Reference

PROJECT CONTROL LOOP

Core invariants

- Write grain/key before joins.
- Raw is immutable/replayable evidence.
- Critical bad data cannot silently publish.
- Same logical input cannot double trusted output.
- State advances only after durable success.
- Failed downstream work cannot imply upstream/source completeness.
- Optimization must preserve correctness.
- Secrets/PII never become ordinary repository/log content.
- Runtime claims are observed, simulated/static or pending - never blurred.

Evidence commands

``python 04_PHASE_EVIDENCE/check_phase_evidence.py`` - structural evidence check only.

``python profile_sources.py SOURCES`` inside a project workspace - learner-safe source inventory.

Use your actual project/test commands in evidence; do not substitute the checker for real validation.

Project gates

- P01 complete -> P02.
- P02 complete -> P03.
- P03 complete -> Capstone.
- Capstone 12/12 with defense ready -> M19.
- M19 mastery -> G07 Final Job-Ready Practical.
