

M06 Review / Repair - Teaching RC2

OPEN ONLY AFTER SAVED ATTEMPT

Repair only the missed state model.

Read one note, close Review, then reproduce the skill in a fresh sandbox/copy.

P01 repair note

Safety starts with pwd and a deliberately disposable path. Relative paths depend on current directory; rm bypasses normal Recycle Bin behavior.

Close Review. Can you reproduce this skill in a fresh disposable copy?

Answer in your own words before continuing.

P02 repair note

Pipe | connects stdout; > replaces; >> appends. history/Ctrl+R retrieves commands but may also retain sensitive command text.

Answer in your own words before continuing.

P03 repair note

Working tree -> staging -> commit. git diff = unstaged; git diff --staged = staged. status is the first diagnostic.

STOP - check your understanding

Answer in your own words before continuing.

P04 repair note

Conflict markers show two competing edits. Resolve the intended final meaning, remove markers, stage, commit, verify clean state.

Close Review. Can you reproduce this skill in a fresh disposable copy?

Answer in your own words before continuing.

P05 repair note

push publishes local; fetch updates remote-tracking knowledge without automatically integrating; pull fetches + integrates. PR is a review boundary.

Answer in your own words before continuing.

P06 repair note

.venv/.env/logs are local/runtime concerns. Prove ignored with check-ignore and untracked with git ls-files. Real committed secret must be rotated/revoked first.

Answer in your own words before continuing.

P07 repair note

restore FILE discards inspected unstaged change; restore --staged unstages but keeps working edit; revert creates a new corrective commit for history.

STOP - check your understanding

Close Review. Can you reproduce this skill in a fresh disposable copy?

Answer in your own words before continuing.

P08 repair note

Clean clone exposes hidden dependencies. README + tracked dependency/config templates should be enough to reproduce the run.
