

M07 Review / Repair - Teaching RC2

OPEN ONLY AFTER SAVED ATTEMPT

Repair the model rule, then fresh-retry.

P01 repair note

DDL is a contract: text identifiers/names, boolean active default true, numeric rating with 0..5 CHECK, required supplier_name/country.

Close Review. Can you solve a changed model/task without copying this note?

Answer in your own words before continuing.

P02 repair note

ROLLBACK only undoes uncommitted changes. Save before/inside/after state. UPSERT must target a meaningful unique key.

Answer in your own words before continuing.

P03 repair note

Index evidence comes from query pattern + EXPLAIN/ANALYZE. Tiny table Seq Scan can be correct.

Answer in your own words before continuing.

P04 repair note

Normalization prevents update anomalies: customer attributes belong with customer entity rather than copied into every line.

Answer in your own words before continuing.

P05 repair note

fact_sales grain = one row per COMPLETED order line. Controls: 12 rows, qty 30, revenue 14130, O1005=0.

P06 repair note

SCD2 closes old version and inserts new. C003 should have North old + East current; exactly one current row.

Answer in your own words before continuing.

P07 repair note

COPY is server-side; `psql \copy` is client-side. Staging receives/validates before final constraints/model.

Answer in your own words before continuing.

P08 repair note

Least privilege: reporting reader needs warehouse USAGE+SELECT, not owner/superuser powers.

Answer in your own words before continuing.

P09 repair note

A tested restore + final validation is stronger than merely possessing a backup file.
