

P2 - Analytics Engineering Platform - Rubric

Project assessment | RC2

Dimensions

- Understand
- Execute
- Transfer
- Debug
- Explain

Critical floors

- No leaked secrets
- No silent acceptance of required-key/quality failures
- Safe rerun/idempotency
- Reproducible run instructions
- Failure evidence and recovery path
- Learner can explain major code/design decisions

Pass rule

A strong total does not override a critical-floor failure. Portfolio release requires a checker/test pass plus human review of architecture, README, failure evidence and defense.
