

M19 Review / Repair - Teaching RC2

OPEN ONLY AFTER SAVED ATTEMPT

P01 repair - Truthful one-page Data Engineer resume

Interviews expose inflated claims quickly. A smaller truthful resume gives you defensible stories and stronger trust.

Repair principle: Use clear headline/summary only if it adds relevant context; do not claim seniority you do not have.

Evidence focus: Cloud/Fabric -> label offline/live accurately

STOP - check your understanding

Answer in your own words before continuing.

P02 repair - GitHub and project portfolio final polish

A repository is stronger than screenshots when another person can understand/run it and see decisions/tests.

Repair principle: Pin/select 2-4 strongest projects, not every exercise.

Evidence focus: reference solution -> not published as own work

Answer in your own words before continuing.

P03 repair - LinkedIn/professional profile without overclaiming

Recruiters compare LinkedIn, resume and GitHub. Contradictions reduce trust.

Repair principle: Headline can state target + concrete skills/project focus without "Senior"/years not earned.

Evidence focus: links -> public safe repo

STOP - check your understanding

Answer in your own words before continuing.

P04 repair - Degree-aware job targeting: apply/skip rules

Beginners waste time either applying to everything or rejecting themselves for every non-match. A rubric creates consistent decisions.

Repair principle: Separate must-have signals from wish-list/preferred language.

Evidence focus: "degree or equivalent experience" -> apply if skills/projects fit

STOP - check your understanding

Close Review and answer a changed version.

Answer in your own words before continuing.

P05 repair - SQL interview drills

Interviewers often evaluate reasoning and correctness more than clever syntax.

Repair principle: Clarify tables/grain/keys/null/duplicate assumptions.

Evidence focus: improve -> index/scale only if asked

STOP - check your understanding

Close Review and answer a changed version.

Answer in your own words before continuing.

P06 repair - Python interview drills

Junior DE Python interviews often test transformation/string/list/dict/file reasoning rather than advanced algorithms only.

Repair principle: Clarify input size/format/nulls/duplicates/order requirements.

Evidence focus: missing customer_id -> define reject/error policy

STOP - check your understanding

Close Review and answer a changed version.

Answer in your own words before continuing.

P07 repair - Data-engineering concepts and troubleshooting drills

Interviews often test whether you understand real failure modes rather than can recite tool definitions.

Repair principle: For duplicates: clarify grain/key/replay/join before dropDuplicates.

Evidence focus: target missing rows -> source-target reconciliation/state

STOP - check your understanding

Close Review and answer a changed version.

Answer in your own words before continuing.

P08 repair - Project walkthrough interview

A strong project walkthrough proves you understand why you built it, not just that files exist.

Repair principle: Start with problem/SLA/source/consumer.

Evidence focus: limitation -> truthful

STOP - check your understanding

Close Review and answer a changed version.

Answer in your own words before continuing.

P09 repair - Architecture/system-design defense for junior roles

Interviewers do not expect senior-scale mastery from junior candidates; they want structured reasoning and appropriate scope.

Repair principle: Clarify source, volume, latency, retention, consumers and sensitive data.

Evidence focus: RTO 4h -> 5m -> redundancy/recovery

STOP - check your understanding

Close Review and answer a changed version.

Answer in your own words before continuing.

P10 repair - Behavioral answers and career-transition story

Behavioral interviews evaluate communication, ownership, learning and collaboration. Fabricated stories are risky and unnecessary.

Repair principle: STAR: Situation context, Task responsibility, Action you took, Result evidence.

Evidence focus: conflict/team -> real collaboration only; do not invent
