

G02 Gate B - SQL + PostgreSQL

PROTECTED UNSEEN ATTEMPT

Starting asset	G02_B_setup.sql
Task	Fresh domain. Return latest event per member with deterministic ROW_NUMBER logic; calculate payment totals by member and plan; use LAG or equivalent reasoning for previous event; keep all members in one result; document join/cardinality and total validation; state one view and one index design.

Attempt conditions

- Learner book, guided labs, prior reviews, web search and AI solving are closed.
- Save the actual workbook/query evidence before any review.
- State grain/result grain, validation checks, assumptions and one limitation.
- If the Gate fails, use targeted repair before a different fresh retest.
