

G04 Gate B Review

Zero-to-Job-Ready Data Engineer 2026 | Protected assessment RC1

Review after attempt only

A strong attempt must preserve the stated grain/identity, validate outputs independently, show safe failure/recovery behavior and provide reproducible evidence. If one competency fails, repair that skill then use a different fresh task - do not copy this review into the attempt.

Expected review principles

- Fresh data/domain must be solved independently.
- Schema failure is blocking, not auto-mapped.
- Corrected shipment wins by declared version rule and appears once.
- Retry/recovery behavior and state commits must be evidenced, not described only.
