

Gate 5B - Distributed Data Fresh Retest

Protected fresh retest | Fleet sensor telemetry | RC1

Scenario

A fleet platform receives vehicle sensor history plus near-real-time events. Build the same underlying competencies with different schema, keys, update logic, partition reasoning and streaming requirements. Do not copy Gate 5A field names or outputs.

Required work

- Explicit schema + data cleaning.
- Reference join + latest-event/window logic.
- Parquet/Delta partition choice.
- Idempotent incremental merge.
- Performance reasoning.
- Kafka partition/key/group/offset/replay reasoning.
- Structured Streaming checkpoint/output plan.
- Run the retest checker and save evidence.
