

M00 Review and Repair Pack

Use only after a saved independent attempt

Release Candidate 1 - Beginner-first production test module

Do not use as a shortcut

This pack is for diagnosis after an attempt. It does not contain a copy-paste solution to the Module Practical.

R01 - File location confusion

1. Write the full path to three files in your workspace.
2. Close all windows. Reopen File Explorer and find each file from the root location rather than Recent.
3. If you cannot, simplify duplicate folder names.

R02 - Extension confusion

1. Turn on visible extensions.
2. Identify which supplied files are XLSX/CSV/JSON/PY/ZIP.
3. Do not change an extension to "convert" a file.

R03 - ZIP confusion

1. Create a fresh copy of DOWNLOAD_ME_FIRST.zip.
2. Extract it.
3. Compare the ZIP icon/container with the extracted normal folder.
4. Open and edit only the extracted copy.

R04 - VS Code workspace confusion

1. Close VS Code.
2. Use File > Open Folder.
3. Select the project root, not src/data.
4. Confirm Explorer shows the whole project structure.

R05 - Terminal current-directory confusion

1. Run the command that displays current location.
2. List contents.
3. Use cd to enter a known subfolder.
4. Display location again and explain what changed.

R06 - Random troubleshooting

1. Recreate the problem.
2. Write the exact symptom.
3. Write one hypothesis.
4. Change one thing only.
5. Record whether it solved the issue.

When to take the fresh retest

Take the M00 Fresh Retest only after the specific repair task that matches your failed skill. Do not repeat the original module practical as your proof; the retest uses a different folder structure and different path problem.
