

Production Capstone - Rubric

Protected final portfolio assessment | RC2

Assessment dimensions

- Requirements interpretation
- Architecture coherence
- Correctness and grain
- Ingestion/raw preservation
- Quality/reconciliation
- Idempotency/backfill
- Modeling/transformation
- Orchestration/recovery
- Distributed/cloud judgment
- Security/CI/observability
- Debugging incidents
- Documentation and defense

Critical floors

- No hardcoded credential
- No unsafe duplicate load after rerun
- Bad data cannot silently pass a stated critical rule
- Recovery/backfill path exists
- Access/PII controls are defensible
- Project is reproducible from documented setup
- Learner explains the design without relying on hidden AI output

Pass rule

The capstone is evidence for job readiness, not a cosmetic portfolio demo. It passes only when the system is reproducible, critical incidents are repaired, and the learner can defend trade-offs and limitations.
