

M19 Module Review

Interview, Technical English & Job Launch | post-attempt review

Open only after genuine attempt

Use this to diagnose reasoning, not to replace the first attempt.

Review L01 - Truthful one-page Data Engineer resume

Expected reasoning: The artifact/decision can be defended line by line and revised from evidence.

Repair trigger: Inflating experience/title, copying generic text or applying blindly without tracking reasons.

Review L02 - GitHub and project portfolio final polish

Expected reasoning: The artifact/decision can be defended line by line and revised from evidence.

Repair trigger: Inflating experience/title, copying generic text or applying blindly without tracking reasons.

Review L03 - LinkedIn/professional profile without overclaiming

Expected reasoning: The artifact/decision can be defended line by line and revised from evidence.

Repair trigger: Inflating experience/title, copying generic text or applying blindly without tracking reasons.

Review L04 - Degree-aware job targeting: apply/skip rules

Expected reasoning: The artifact/decision can be defended line by line and revised from evidence.

Repair trigger: Inflating experience/title, copying generic text or applying blindly without tracking reasons.

Review L05 - SQL interview drills

Expected reasoning: You can solve a different fresh prompt and explain your validation.

Repair trigger: Opening solutions early or memorizing a previous mock.

Review L06 - Python interview drills

Expected reasoning: You can solve a different fresh prompt and explain your validation.

Repair trigger: Opening solutions early or memorizing a previous mock.

Review L07 - Data-engineering concepts and troubleshooting drills

Expected reasoning: You can answer follow-ups without reading your notes.

Repair trigger: Reciting tool definitions without connecting them to system behavior.

Review L08 - Project walkthrough interview

Expected reasoning: You can answer follow-ups without reading your notes.

Repair trigger: Reciting tool definitions without connecting them to system behavior.

Review L09 - Architecture/system-design defense for junior roles

Expected reasoning: You can answer follow-ups without reading your notes.

Repair trigger: Reciting tool definitions without connecting them to system behavior.

Review L10 - Behavioral answers and career-transition story

Expected reasoning: A listener can follow the answer and ask meaningful technical follow-ups.

Repair trigger: Long generic answers, fake confidence or jargon without a concrete example.

Review L11 - Technical English: explain code, failures and decisions clearly

Expected reasoning: A listener can follow the answer and ask meaningful technical follow-ups.

Repair trigger: Long generic answers, fake confidence or jargon without a concrete example.

Review L12 - Application tracker, feedback loop and weekly repair cycle

Expected reasoning: You can identify the current funnel bottleneck and one targeted repair.

Repair trigger: Changing the whole career plan after a few untracked rejections.

Review L13 - Timed coding test: arrays, strings and hash-map problems

Expected reasoning: You can solve a different fresh prompt and explain your validation.

Repair trigger: Opening solutions early or memorizing a previous mock.

Review L14 - Combined SQL + Python interview simulation

Expected reasoning: You can solve a different fresh prompt and explain your validation.

Repair trigger: Opening solutions early or memorizing a previous mock.
